

Clue: use diverse and fair data

When creating or training AI, make sure the data you use includes all kinds of people in different professional positions.

Think of it like cooking up a really tasty dish – you need a mix of different ingredients to make it just right. In the same way, **AI experts have to gather data from lots of different people with different jobs and backgrounds to make sure their systems understand all the complexities of the world.** This helps avoid unfairness or biases creeping into the AI's decisions.

Remember, the data you feed into AI shapes how it behaves. So, it's crucial to make sure it's a good mix of people from all walks of life. By doing this, **AI developers aren't just making sure their systems work well technically, they're also making sure they're fair and inclusive for everyone. So, whether you're into tech or not, understanding this is really important for creating a better, more equal future.**
